UDL FOUNDER 30-MINUTE SELF-AUDIT

Schoolify Academy · Universal Design for Learning (P2-M3 Deliverable)

Learner Partner: Yassine (16, Dyslexia / Dyspraxia)
Door: Association Maroc Dys (Casablanca) · Pre-Session M4

1. THE JOURNEY AUDITED

Core Journey (Same as P2-M2): Open course link → Browse foundational module → Watch in-video quiz clip → Submit quiz answer → View feedback & AI learning gap diagnostic. *(Zero changes made to the journey flow; audited on same Infinix Smart 7 Android device).*

2. TOP 9 SCORECARD

CHECK (UDL FOUNDER TOP 9)	QUESTION TO ASK YOURSELF	SCORE	NOTE (WHERE IT BREAKS)
E1. Progress effort-based & visible	Can a slow learner SEE they are advancing?	No	Streak & progress bar only advance on 100% correct answers. Failed attempts display red cross with 0 XP, masking Yassine's 15-min reading effort.
E2. Failure safe & private	Retry without penalty? Ranking off by default?	Partial	Students can re-attempt quizzes, but public cohort leaderboards expose low initial scores by default, causing embarrassment.
E3. Content mirrors their reality	Would a Moroccan public school student recognize themselves?	Yes	Scenarios feature local Moroccan high-school and vocational contexts (e.g., managing a local shop, Casablanca transit examples).
R4. Key concepts in ≥ 2 formats	Your 5 hardest concepts: text + audio/visual?	No	Theoretical concepts rely strictly on dense French text blocks. No visual concept maps, diagrammatic summaries, or audio breakdowns.
R5. Language matches spoken reality	Darija audio on instructions and prompts?	No	All interface text, problem prompts, and error dialogs are exclusively written in academic French; zero Darija oral scaffolding.
R6. Hard words get support	Tap-to-hear / definition / example?	No	Specialized French vocabulary terms are static text. Tapping does nothing; Yassine must leave app to Google words, triggering distraction.
A7. More than one way to answer	Tap, speak, choose, show — not typing-only?	Partial	Supports multiple-choice tapping, but open-ended questions strictly require typing; no voice-to-text or image upload options exist.
A8. Help before failure	Hint + worked example on every exercise?	No	No "Hint" or "Show Example" button exists prior to submission. Explanations only unlock AFTER an answer is marked incorrect.
A9. Learner controls the pace	Replay, pause, no forced rhythm?	No	In-video quiz imposes a 45-second auto-submit timer. Pausing the video locks the quiz modal, forbidding Yassine from re-reading calmly.

3. TOP 3 FLEX POINTS (RANKED BY IMPACT FOR YASSINE, THEN EFFORT)

[Principle: Action & Expression (A-E)] · Rank 1 (Critical): Untimed Learning Mode with Low-Stakes "Progressive Hint" Scaffolding.
The Flex: Remove the mandatory 45s countdown timer completely, allowing the learner to freeze the screen and review. Add a persistent, 1-tap "Need a Hint?" (*Bghiti Mosa3ada?*) button that shows a worked micro-example before submitting.
How we will test in Co-Design (P2-M4): Hand Yassine his Infinix phone with a timed quiz vs. the untimed hint-enabled build; observe whether his motor anxiety subsides and if he uses the hint to solve the problem without abandoning.

[Principle: Representation (R)] · Rank 2 (High Impact): Bilingual Darija/French Audio Scaffolding & Tap-to-Define Glossaries.
The Flex: Provide an inline audio toggle on all question stems and explanations that speaks the prompt in clear Moroccan Darija, paired with dotted underlines on complex technical words that reveal a simplified definition upon tapping.
How we will test in Co-Design (P2-M4): Ask Yassine to navigate a question containing 2 complex technical French terms using only the tap-to-listen audio button and glossary pop-up; measure if he grasps the question without his cousin's translation.

[Principle: Engagement (E)] · Rank 3 (High Impact): Effort-Based XP Meter & Private Safety Sandbox (Opt-In Ranking).
The Flex: Award progress XP for active engagement, hint usage, and video completion regardless of whether the first attempt was correct. Make cohort leaderboards strictly private and opt-in so failure is confidential and psychologically safe.
How we will test in Co-Design (P2-M4): Intentionally trigger an incorrect answer during the co-design walkthrough; observe Yassine's facial reaction and demeanor to ensure the interface encourages a retry rather than producing a shut-down.
